dipperLog

Groundwater Data Logging Made Affordable

Heron Instruments' **dipperLogs** are a durable, versatile and cost effective tool which will deliver accurate water level and temperature readings for many years. Groundwater professionals have been successfully employing the **Heron** family of instrumentation to monitor both open waters and wells, to perform pump and slug tests, and to complete wetland and tidal studies with excellent results for over 20 years.

With the dedicated, intuitive software, the **dipperLog** is quick and easy to program and launch and allows for simple data recovery. Easily save your data in a tabular display and graph and view both parameters side by side in a split screen.

Heron also offers various accessories to further enhance your logging experience. The wide range of transducer values (available in both absolute and vented models) will ensure the collection of the most accurate of levels.

dipperLog^{TOUGH}

The **dipperLog TOUGH** is a **premium logger**, with titanium body and transducer coupled with **Teflon O-rings**, is suitable for use in the most caustic and hazardous of environments. The **dipperLog TOUGH** offers a memory capacity of **64,000 data points** and a choice of pressure ranges.

dipperLog⁶⁴

The **dipperLog 64**, our flagship logger, offers a maximum storage capacity of **64,000 data points** and an extended battery life up to 10 years. The **dipperLog 64** comes in a wide variety of pressure ranges and deployment options.

dipperLog^{VENTED}

The **dipperLog VENTED**, incorporates a **gauged transducer** that measures pressure exempt from barometric influences. The **dipperLog VENTED** is **removable from the vent cable** allowing for easy field replacement. *Attach the NEW Vent Cap Adapter for deployments (without vented cable) used in shallow wetland studies.*

4-20mA^{Pressure Transmitter}

The **4-20 mA Pressure Transmitter** is easily integrated into an existing **SCADA system** or with a third party data logger. It will provide a continuous water level reading for your application. It can also be equipped with a digital display.

dipperLog³²

The **dipperLog 32**, the most economical data logger in our lineup, has a maximum storage capacity of **32,000 data points** and an expected battery life up to 5 years. The **dipperLog 32** is only available in a 30m/100' pressure range.

barLog

The **barLog** is configured to **measure barometric pressure fluctuations** necessary to compensate your absolute **dipperLog** data files. The **barLog** takes readings every 1 hour and has a capacity for **32,000 data points**.

◇ Dependent upon use

Suspended Version

This is the simplest and most inexpensive method of deploying a **dipperLog**. Suspend the dipperLog in the well using a non-corrosive, no-stretch wire or cord. No communication is possible with the **dipperLog** in-situ, the **dipperLog** must be programmed and started before deployment then recovered for data retrieval and reprogramming.

Add the Vent Cap Adapter to the **dipperLog VENTED** for deployments in shallow wetland studies.

Direct Read Well Head Version

This is the least labour intensive option. The **dipperLog** is suspended on a direct read cable, which establishes a connection to the **dipperLog** at the wellhead. Programming of the **dipperLog**, downloading of data and stopping and starting data collection can be done while the logger is deployed.

Available in both absolute and vented models. Real time display is available with this configuration.

◇ Dependent upon use

Reel Version

The reel version is an ideal option when transporting your dipperLog from site to site for pump and slug tests or any other short term deployment. Programming and downloading of the data is capable via the connection on the face plate on the reel.

Available in both absolute and vented models.

Real time display is available with this configuration.

4-20mA

The 4-20mA Pressure Transmitter is easy to install by simply attaching the vented cable to an existing SCADA system. A two wire 4-20mA current loop is used for signal transmission. This is a pressure sensor only and has no data logging capability.

SCADA systems are not available through Heron Instruments.
